

Intended as a guide only. I'm not responsible if your wheel doesn't fit. The templates are as close as I could make them and still have acceptable clearance. For the Tundra big brake up grade to 13WL calipers. Print out and glue to a stiffer piece of cardboard. (manila file folder works good) Cut as accurate as possible. A ruler and razor knife work great on the straight cuts. Lay inside of wheel on the mounting surface. Line up with 2 stud holes adjacent to each other. Check for clearance of template against the wheel.
